

Transgender Voice Training

Find Your Voice

The way we communicate defines how we are viewed by others. Communicative difference between men and women is much more than just vocal pitch. At the Hearing and Speech Clinic, we specialize in evaluating and treating all aspects of communication. We can help you find a voice you can be happy with.

*** A comprehensive evaluation of your communication pattern includes an assessment of:**

- * Habitual Pitch**
- * Pitch range**
- * Resonance**
- * Inflection and Intonation**
- * Language (word choice and phrasing)**
- * Non-verbal Communication**
- * Other aspects of communication as needed**

*** Once your evaluation is completed, we also offer individualized training programs tailored to your unique goals and needs.**

The Hearing and Speech Clinic is a graduate training program in the Department of Hearing and Speech Sciences. Sessions are conducted by graduate clinicians and supervised by clinical faculty who are licensed speech-language pathologists.
